

SureFire

SPECTRUM 200SC

INSECTICIDE

SPECTRUM 200SC provides systemic control of a broad range of insect pests, acropetally distributed and featuring a water-based 200g/L Imidacloprid formulation, in the following areas:

- Turf
- Ornamentals
- Shrubs & Trees
- Crops & Vegetables
- Subterranean Termites

NEW!

SPECTRUM 200SC INSECTICIDE

- ☑ **Turf:** Spectrum insecticide controls the first instar of african black beetle, argentinian scarab & pruinose scarab; it has extended residual activity in soil, allowing flexibility in application timing, with a single application giving season-long control. Surefire Spectrum, when incorporated with PCT 's Surefire Fivestar Insecticide (Bifenthrin) , will control all stages of an insect 's life cycle. An insecticide application combining these two products will control the current population & the residual nature of these products will prevent further insect infestations.
- ☑ **Ornamentals:** Spectrum controls a broad range of sucking & chewing insects, including white fly, aphids, thrips, mealy bug, azalea lace bug, psyllids, soft scales, curl grub, bronze orange bug, harlequin bug, hibiscus flower beetle & fullers rose beetle. Spectrum is systemic in action; it keeps working for weeks after treatment, effectively immunizing plants against the target pests if they return. It is soft on non target insects such as ladybirds, spiders, & soil micro- organisms.
- ☑ **Shrubs & Trees:** Spectrum treats elm leaf beetle in elm trees, flatid (*jamella australiae*) in pandanus trees, chrysomelid beetle larvae & psyllids in eucalyptus seedlings & is useful for control of various insects in shrubs.
- ☑ **Crops & Vegetables:** Spectrum is effective for the control of green peach aphid, woolly aphid, grey cabbage aphid & turnip aphid on various crops as well as aphids, mirids & brown flea beetle on cotton. It is effective in the control of sucking pests on stone fruit, apples, cucurbits, capsicum, egg plant, potatoes, sweet potato, brassicas & cucumber.
- ☑ **Subterranean Termites:** Spectrum is registered for use in the control of all species of subterranean termites (including *mastotermes darwiniensis*) in new and existing buildings.
