

# Zap those Wasps

## RIGHT THERE!!

**Do unto wasps before they do unto you!  
One wasp sting is bad enough. Multiple stings  
are life threatening. And it is worse if you are  
up a ladder or in confined spaces.**

***Wasp Zapper is as important as any of your tools.  
Before you start any job, look around for nests and  
... get 'em before they get you!!***

**The best defence against wasps is attack!!**

**... and the best attack is**

# Wasp Zapper

Some aerosols seem to stir insects up... make them even angrier! It's little consolation to know the wasps will die... after they've knocked you off the ladder or out of the cherry picker! **WASP ZAPPER IS DIFFERENT ... it's like a hand grenade!**

**WASP ZAPPER** is a very different formulation. Scientists have isolated two of the fastest knockdown components of the natural pyrethrins molecule and synthesised them. They are like liquid dynamite to flying insects... but not to us mammals.

And that's not the end of it. The carrier and propellant in the **WASP ZAPPER** aerosol have a devastating effect on wasps.

The combination almosts blasts attacking wasps out of the air from 2 metres away. Or, if you've found a nest in the soil, use the soil injector attachment, insert it fully into the mound, spray for just 5 seconds... and there'll be very few get out past the entrance.

**WASP ZAPPER** doesn't freeze wasps... it just seems that way.

If you or your team work outdoors, you should insist on a can of **WASP ZAPPER** in every tool box. It's as important as any safety equipment. Looking around for wasps should be in your safety procedure. There have been worker deaths from wasp stings... in unimaginable agony. There have been worker injuries where involuntary reactions to stings have caused lost control of tools and footing.

**Pack: 12 X 400g aerosols in a carton**

**Call this Phone number and order some worker protection today...**
