Termitte Management
To minimize the risk of termitte infestation, the subfloor area of buildings should be kept free of stored or waste timber and all other building materials that attract termites. Appropriate actions should also be taken to eliminate any undue dampness caused by leaking water or sewerage pipes, or inadequate drainage.
Service Requirement
Regular, competent inspections by a licensed Pest Manager are recommended as part of an overall termite management program to determine the prevailing termite pressure and environmental conditions and consequent requirement for further termite management options. Inspections should be performed at least on an annual basis, but more frequent inspections are strongly recommended.

NOTICE
PCT Holdings Pty Ltd warrants that this product conforms to its chemical description and its reasonably fit for the purposes stated on the label when used in accordance with Directions for Use under normal conditions of use. No warranty of merchantability or fitness for a particular purpose, express or implied, extends to the use of the product contrary to label instructions or under off-label permits not endorsed by PCT Holdings Pty Ltd, or under abnormal conditions.

MATERIAL SAFETY DATA SHEET
Additional information is listed on the Material Safety Data Sheet which is available from PCT Holdings Pty Ltd on request. Call Customer Service Toll Free on 1800 630 877 or visit our web site at <http://nemesis.au.com>

FIRST AID
If poisoning occurs, contact a Doctor or Poisons Information Centre (PHONE AUSTRALIA 131126).

SPILLS
Sweep up material and wrap in paper. Dispose of as above. Prevent entry of spilled matter into drains or waterways.

STORAGE AND DISPOSAL
Store in the closed, original container in a dry, cool, well-ventilated area out of direct sunlight.
Single inner before disposal. Dispose of inings in a disposal pit specifically marked and set up for this purpose, clear of waterways, desirable vegetation and tree roots.
Puncture and bury empty containers and dispose of unused bait in a local authority landfill. If no landfill is available, bury the containers or unused bait below 500mm in a disposal pit. Empty containers and product should not be burnt.

ENVIRONMENT
Dangerous to aquatic arthropods. DO NOT contaminate streams, rivers or waterways with the chemical or used containers. DO NOT place Nemesis in any area where, because of movement of water, it could be washed into a body of water containing aquatic life, such as ponds or streams.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT
Do not use water that has been chlorinated or contaminated in any way.
Stir until paste of uniform consistency is achieved. Add bait as necessary to approved bait stations or directly into termite workings. Replenish as required.

CRITICAL COMMENTS
Do not use water that has been chlorinated or contaminated in any way.
Stir until paste of uniform consistency is achieved. Add bait as necessary to approved bait stations or directly into termite workings. Replenish as required.
When handling the bait matrix wear disposable latex rubber gloves to ensure odours or contaminants that may deter termite feeding are not transferred to the bait matrix. Conditions are hot and dry.
Note: 300mL of bait matrix equals 100g.

GENERAL INSTRUCTIONS
Nemesis is used with in-ground and above-ground Stations and interceptors and to concentrate their feeding in the stations. In-ground stations are designed to intercept foraging termites with timber interceptors and commercial properties, (except residential and commercial properties, including food handling establishments, and other areas where termite presence can be detected eg fences, utility poles, trees, bridges, wharves and landscaped structures in all areas of Australia except Tasmania.
